

Series VEDL inline ejectors

Vacuum compact ejectors in technopolymer without moving parts, based on the Venturi principle, used for direct installation on suction pads. Available in two sizes with internal nozzle of 0,5 and 0,7 mm and with suction rate from 8 to 16 l/min.

- » No moving parts for long life and maintenance
- » Easy and fast installation directly at the gripping point
- » Optimized dimensions
- » Reduced weight, 5 g only, ideal for dynamic applications
- » Low air consumption

Generally, these vacuum compact ejectors are used for direct installation inline between the suction pad and compressed air supply. This substantially reduces the volume to be evacuated and allows therefore shorter cycle times.
